Support your patients, improve your knowledge

This workshop is designed for all health professionals who care for people in practice or the community who suffer from asthma – a condition that currently affects around 5.4 million people in the UK, including 1.1 million children.

The workshop covers the definition of asthma, its prevalence and impact on lives, its diagnosis and management and the treatment of an acute asthma attack. We discuss guidelines on the management of asthma issued by the British Thoracic Society, Scottish Intercollegiate Guidelines Network and NRAD recommendations.

With informal lectures and interactive practical sessions delivered by expert practising clinicians, this one-day workshop will enable you to recognise and treat symptoms appropriately, improving the quality of life of your patients with asthma.

You will learn to . . .

- Understand what asthma is and its effects
- Recognise the prevalence of asthma and its impact
- Assess and manage people with asthma
- Apply BTS/SIGN and NRAD asthma guidelines to your practice
- Treat an acute asthma attack

Our workshops

All our workshops are led by trained educators who are also experienced practising clinicians. We use high-quality learning materials and innovative practical exercises to tailor content for each group. We believe that learning should be fun and we always encourage participation.

£25 delegate fee applies for all Practice Nurses and HCAs in Wessex.
